Wiley-Blackwell, 2003. Book Condition: New. Brand New, Unread Copy in Perfect Condition. A+ Customer Service! Summary: Review from Times Higher Education Supplement, February 2004 -Alan Bilsborough, University of Durham Human evolutionary studies now encompasses such wide-ranging subject matter that accounts confined to simple narrations of the fossil record no longer suffice, while the pace of discovery creates a continuing demand for clear, balanced introductions to the subject. This book's authors - an expert science communicator and a researcher who has had a major influence in broadening theoretical perspectives on human evolution - form a dream team to guide us through the subject's complexities. This much-expanded second edition of an established text differs from its predecessor and virtually every other treatment in its range and its emphasis on principles, whether of evolutionary theory, phylogenetics, behaviour, ecology or comparative frameworks. Whereas most accounts condense such fundamentals into an abbreviated introduction before homing in on the hominid fossil record, this book dedicates some 200 pages, or about 40 per cent of the text, to the subject. The approach is to view human evolution as exemplifying general evolutionary forces and processes that impact on hominids as on other species, not to treat human evolution as a one-off case for which issues of evolutionary dynamics, adaptation, ecology and so on have little, if any, relevance. The book is impressively broad in scope, well organised and clearly written. Key issues are flagged up, with questions alongside the text to serve as prompts. Alternative interpretations are accurately summarised, with a balanced commentary and sufficient facts to indicate each argument's basics without overloading detail. Each chapter ends with a "Beyond the facts" box summarising a current issue and its underlying concepts to stimulate further thought. There are reasonable illustrations of important fossil specimens and excellent diagrams that greatly...
