Brand New Book ***** Print on Demand *****.Excerpt from Stresses in Tall Buildings: An Investigation of the Stresses in Tall Steel Buildings of the Cage Construction Type With Portal Bracing This investigation has been undertaken with a three-fold purpose in view, as follows: First, to develop a practicable mathematical solution of the stresses in tall buildings with portal bracing for all types of loadings, and, by its application, to determine the principal errors which exist in present methods of design. Second, to endeavor by experiment on an existing structure to find by actual measurement the distribution and amount of stresses and distortions due to wind pressures, the only loading which can be practically varied on such a structure. Third, to give in a final chapter a full and definite resume of all findings and suggestions for designers as derived therefrom, so as to make the results of the investigation of value to the practicing engineer or architect without wasting his time in perusal of the body of the investigation, a proceeding which would, it is believed, be a discouraging one for a man who has been too busy in practical work to follow up closely a mathematical discussion. This investigation consists, then, of a series of mathematical demonstrations, followed by an extensive series of applications and comparisons, and, finally, what is believed to be some very valuable conclusions offered in the last chapter, with references to the chapters from which the conclusions are drawn in case more detailed information is desired. Results have been shown graphically as far as possible, in addition to giving the actual tabular values. It is believed the investigation will be equally of value to the practical as well as...
