This piece of glass is then fused into one extremity of a pear-shaped glass bulb, the opposite end of which is left open to enable the contained air to be exhausted. To effect this the open end of the bulb is placed in connection with a Sprengel or similar high-vacuum air-pump, and when the air has been sufficiently exhausted from the bulb to ensure that the filament shall incandesce without burning, the small open end of the bulb is sealed by melting the glass in a hot flame, and the lamp is complete. Figs. 38, 39, 40, and 41 show the usual forms given to incandescence lamps. Fig. 38 is the ordinary bottom-loop lamp, which shows the carbon filament, the points of attachment to the platinum, and the platinum wires, the outer curls of which form the connections of the lamp to...
