Reviews

The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.

Another solution is given in Reprint, Vol. XXXIII., p. 67. 6766. (By Professor Cayley, F.E.S.)--Find the stationary and double tangents of the curve $4 + y^4 + z^4 = 0$. 5527. (By W. S. B. Woolhouse, F.R.A.S.)--Determine, by a simple construction, the size of the equilateral triangle from or into which a triangle can be orthogonally projected. Solution by C. Leudesdorf, M.A. Let ABC be a triangle, G its centre of gravity; and let BC be bisected at D and trisected at E; join G to B, D, E, C. In order to project ABC into an equilateral triangle, it will be sufficient to project so that BGE, DGC become right angles. Draw with centres D and E two circles, each of radius DE, and through G and the points where these circles cut, draw a third circle cutting BC in P and Q. Then GP, GQ, are the right-angled pair of the involution of which GB, GE; GD, GE are pairs; so that, if a transversal be drawn parallel either to GP or GQ, as in the figure, the point O will be the centre of the involution, and therefore semicircles described on GP, GQ as diameters, on the side nearer to G, will cut OG in the same point g. Taking g as the orthogonal plane projection of G, and the transversal as the axis, the projection of any point is at...
