Reviews

This published publication is fantastic. it had been writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Junius Herman)

MATHEMATICAL PROBLEMS AND EXAMPLES, ARRANGED ACCORDING TO SUBJECTS, FROM THE SENATE-HOUSE EXAMINATION PAPERS, 1821 TO 1836 INCLUSIVE

General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 84 pages. Dimensions: 9.7in. x 7.4in. x 0.2in.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1836 Excerpt: . . . SECTION XV. QUESTIONS IN PURE DYNAMICAL SCIENCE, NOT INCLUDING CENTRAL FORCES. 1. Find the law of force by which a body may describe a rectangular hyperbola, the force acting in parallel lines perpendicular to one of its asymptotes. 2. Two pendulums, the lengths of which are L and , begin to oscillate together, and are again coincident after n oscillations of the first pendulum. Given L to find I. 3. In what direction must a body be projected with a given velocity from a point in a given inclined plane, that the range may be the greatest possible 4. Two bodies are projected from two given points in given directions and with given velocities; find their distance at the end of t. 5. A rod is placed in an inclined position, with one end upon a perfectly smooth horizontal plane; find the equation of the curve described by the other extremity whilst it falls. 6. Explain what is meant by accelerating force; and when P draws up Q in a machine, find the force accelerating Qs ascent, both when P and Q move with the same and with different velocities, the inertia and friction of the parts of the machine not being considered. 7. Two equal bodies A and B are connected by a string of given length: A is placed in a horizontal groove, and B hangs freely down, the string passing through an aperture which is continued along the bottom of the...
